

Web Fundamentals: Student Task Flow

Duquan is a non-traditional student. While Web Fundamentals is Duquan's first experience with website design and coding, he is eager to learn. He has recently completed *Week 6-7: Tables, Divs, and Spans*. While he successfully completed his online assignment and homework, and got 9 out of 10 points on the online quiz, he felt he was slightly struggling to grasp the material. He is now about to tackle *Week 8-9: Intro to CSS* and would like to get more in-depth with the course to maximize his education.

Duquan decides to utilize Web Fundamentals' *Resources* for supplemental information on CSS.

Once Duquan feels more comfortable, he begins *Week 8-9*.

Alternately, Duquan can use the *Widget* to access relevant resources during completion of *Week 8-9*. The *Widget* can be collapsed and expanded, and is independant from *Primary Navigation* and the *Dashboard*.

Duquan feels more confident with his work on *Week 8-9*, but he wants to see how much his homework assignment will affect his overall grade. He also wants to see if his work (on the course site) from the previous week has been graded.

Alternately, if Duquan has navigated away from the lesson, he can use the *Dashboard* to get to the *Grade Book*.

Duquan clicks on *Grade Display* and sees that his teacher has posted a grade for his online course assignment from last week. After clicking on the assignment title, he views a detailed explanation of his grade and its affect on the entire course. Three grades are displayed: a grade for the assignment, an interim grade (the assignment averaged with all assignments-to-date), and a course grade (averaged with all assignments, including future work). A note clearly indicates that the total grade is low as future assignments are defaulted as zero points.

Duquan then clicks on *View Due Dates* and is able to see the same information for the homework assignment he is about to undertake. Duquan also notices a warning in *Grade Book*. He clicks on it and sees that he neglected to turn in his previous homework assignment and it is the last day before being considered late! Duquan has completed the assignment but forgot to upload it. Still within *Grade Book*, he clicks on the assignment, and then *Submit Homework*.

Duquan is redirected to the *Submission Module*. He clicks *Submit Assignment* and then *Upload*. Feeling more confident about his work, Duquan logs off of Web Fundamentals. Alternately, the web site will log off automatically.
